## iSafari® Case Study – American Identity

### The History...

American Identity, an Industry Leader in branded merchandise, employs MQ Series to communicate order transactions between a large bank of web servers and an iSeries. This method required an MQ Series consultant for maintenance and new projects.

### The Need...

American Identity required real-time calculation of multiple shipping rates from their iSeries to their .NET shopping cart system. The estimated project cost using MQ Series was \$100,000 + consulting fees. Timely data delivery, interfacing to internal systems using RPG and .NET skills, all while proving budget friendly, provided for the scope of the project.

### Enter iSafari® ...

- **Day 1** Adventure**Tech** consultant arrives - **iSafari®** is installed...
  - Pilot RPG program written using an **iSafari®** XML server...
  - Average data turnaround response times of 0.2 sec...
  - Consultant leaves after using 6 of 80 built-in package hours ...
- **Day 2** **iSafari®** XML interface complete - Application Development Cycle starts...

### The Post Mortem...

- Pilot XML RPG program setup in 6 hours using **iSafari®**
- Performance exceeded expectations
- Programming staff trained in **iSafari®** for future projects in 6 hours
- **iSafari®** total product/project cost : \$20,000
- MQ Series not required for project saved \$80,000
